Locations of areas of maintenance: All Parish facilities and public right of ways now maintained by Jefferson Parish in whole or in part may be a part of the bid. Jefferson Parish will determine the extent of the area to be maintained by the contractor. Locations may change from week to week. The contractor, with the assistance of Jefferson Parish, will schedule the cutting areas based on the geographic location and size of the area to be maintained, to ensure that the travel time from site to site is kept to a minimum. The main focus will be on the canal slopes and tops, rough cut flat areas. The contractor should visit as many of these sites as required to get a full comprehension of the scope of work to be performed under this bid.

**A. Deep Deck Design**

The purpose of the specialty deep deck as required is to minimize or eliminate scalping. The deep deck design allows for a trailer mowing height by extending a standard deck sidewall. However, this is not the only modification that would be required to achieve a taller cut of grass. To provide the proper lift of grass, special updraft blades are used in conjunction with a larger area between the blade tops and underside of the deck. This larger area is achieved by another extension of the deck sidewall, creating a very heavy deck. These heavy modified decks would carry too much weight to be used on 28-foot slope mowers. Therefore, the width of the cutting decks would be trimmed from a standard 60" width to a 50" width. This 50" width deck will be used on all 28-foot slope mowers. The 23-foot slope mowers will still use a 60" deep deck draft.
